

Project Title: Project Safe Haven Team, April 17, 2025 Belhaven Mental Health
SafeHavenTeam

I. Breakdown Analysis Goal: Safe Haven App Users will be able to 1. Log In/Out by scanning the QR code, 2. Request email, 3. Mood Tracking, 4. Daily Journaling, 5. Accessibility and Integration with Resources, 6. Privacy and Security, 7. User Feedback and Contact Options, 8. Push Notifications.

Task Completed: 1. Stakeholder Interviews, 2. User Story Mapping, 3. Prioritized Backlog Creation.

Done Rule: All user stories are clearly defined, validated by stakeholders, and prioritized for development.

II. Design and Development Goal: To translate user stories into app designs and code reviews and meets design acceptance criteria.

Task Completed: 1. Wireframes and Prototypes reviewed and approved.

Development of MVP Features.

Done Rule: Functionality adheres to user stories, passes initial code reviews and meets design acceptance criteria.

III. Testing Goal: To ensure app reliability, functionality and usability.

Task Completed: 1. Unit Testing, 2. User Acceptance Testing, 3. User Acceptance Testing.

Feedback and Revisions Incorporated.

Done Rule: Test Passed with no critical issue and app usability meets user expectations.

Wireframes and prototypes reviewed and approved.

Development of MVP (Minimum Viable Product) features.

Done Rule: Test pass with no critical issues and app meets usSers' acceptance and testing.

Feedback and revisions incorporated.

4. Deployment Goal: To successfully launch the app.

Task Completed: Deployment Checklist Complete.

Done Rule: Deployment is Validated, and post-launch metrics are monitored.
